The Modulor and Modulor 2 Fondation Le Corbusier,2015-04-24 In the years 1942 to 1948, Le Corbusier developed a system of measurements which became known as “Modulor”. Based on the Golden Section and Fibonacci numbers and also using the physical dimensions of the average human, “Modulor” is a sequence of measurements which Le Corbusier used to achieve harmony in his architectural compositions. Le Modulor was published in 1950 and after meeting with success, Le Corbusier went on to publish Modulor 2 in 1955. In many of Le Corbusier’s most notable buildings, including the Chapel at Ronchamp and the Unité d’habitation, evidence of his Modulor system can be seen. These two volumes form an important and integral part of Le Corbusier’s theoretical writings.

The Modulor by Le Corbusier 1943-54. Revised and Extended Edition. Juan Manuel Franco Taboada,2018-04-02 This book is a revised and extended version of the article that I wrote and published in 1996, 22 years ago now, which for some time I have felt the need to update. Some parts of the text have been modified, others removed and others extended, all as a result of the maturity that I have gained after all these years of experience. I have of course also changed some of my own pictures which were the result of a surprising and naive confidence in myself. Some of the original images from my old edition of the Modulor have been retained, I suppose out of pure nostalgia and a love for one's own books, despite the fact that they could have been replaced by others that were better scanned than the originals produced with an old hand-held scanner... and others have been removed.I believe that this evolved version of the original article will be worthy of greater

recognition from the large number of people from around the world who have been and are kind enough to read it. Manuel Franco, A Coruña, April 2018

Le Corbusier Kenneth Frampton, 2024-05-16 Le Corbusier is probably the most famous architect of the 20th century. The richness and variety of his work and his passionately expressed philosophy of architecture have had a gigantic impact on the urban fabric and the way we live. Weaving through his long and prolific life are certain recurrent themes his perennial drive

towards new types of dwelling, from the early white villas to the Unité d'Habitation at Marseilles; his evolving concepts of urban form, including the Plan Voisin of 1925 with its cruciform towers imposed on the city of Paris and his work at Chandigarh in India; and his belief in a new technocratic order. The distinguished critic and architecture historian Kenneth Frampton re-examines all the facets of his artistic and philosophical world-view in light of recent thinking, and presents us with a Le Corbusier for the 21st century. This revised edition features a new introduction; some illustrations have now been replaced with colour.
